Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: claims 1-7 are considered allowable over the prior art as the prior art does not teach a supply section that supplies model operation information indicative of an operating state to be taken by said operator member, a reactive force information generation section that generates reactive force information corresponding to a difference between the operating state detected by said detection section and the operating state indicated by the model operation information, and a reactive force impartment section that imparts said operator member with a reactive force corresponding to the reactive force information generated by said reactive force information generation section.

Claims 9 and 10 are considered allowable over the prior art, as the prior art does not teach a supply section that supplies, for each of the axes, model operation information indicative of an operating state to be taken by said operator member, a reactive force information generation section that generates, for each of the axes, reactive force information corresponding to a difference between the operating state detected for the axis by one of said plurality of detection sections and the operating state indicated by the model operation information supplied for the axis; and a reactive force impartment section that imparts the individual axes with separate reactive forces on the basis of the reactive force information generated for the individual axes by said reactive force information generation section, wherein a plurality of control signals are provided on the basis of the detection signals outputted from individual ones of said detection sections.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
